1. In the Bayesian approach, it is unnecessary for events to be repeatable in order to define a probability **1 / 1 point**

- (●) True
- ( ) False

Correct

2. Bayesians use a prior to incorporate previous knowledge to make inferences while Frequentists do not **1 / 1 point**

- (●) True
- ( ) False

Correct

3. One way Frequentists incorporate their domain knowledge in through the use of p-values to reject a hypothesis **0 / 1 point**

- ( ) True
- (●) False

Incorrect

4. Frequentists express a probability over a hypothesis while Bayesians do not **1 / 1 point**

- ○ True
- ◉ False

✓ **Correct**

5. Bayesians do not need to accept or reject a hypothesis since they have the full distribution of the hypothesis allowing them to quantify the uncertainty of that hypothesis **1 / 1 point**

- ◉ True
- ○ False

PAGE

✓ **Correct**
